

1 Starting at the middle-top 90° point, draw a slight arc across four cells, being sure to intersect the adjacent radial at the halfway point as pictured. Repeat in the opposite direction to create an "X."

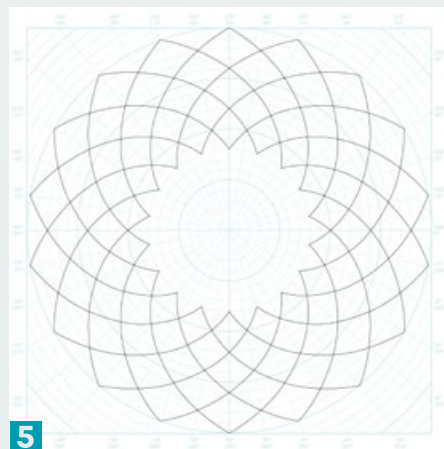

2 Repeat the "X" pattern along the circumference of the outer circle, connecting at the top and bottom of each pattern as you go around.

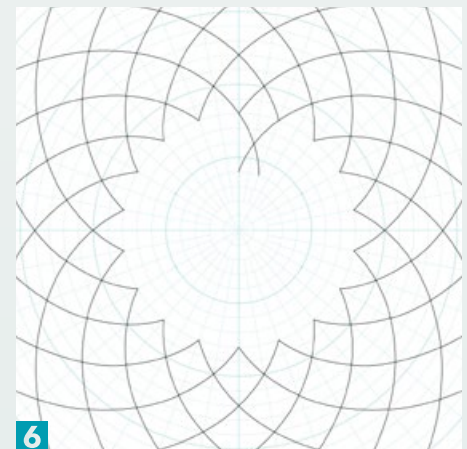

3 Moving inward within the circle, locate the next grouping of four cells and make an "X" pattern following the same arc from the outer band.

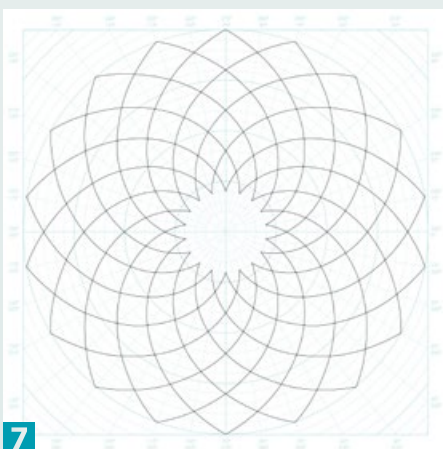

4 Complete the row and start the next level in.

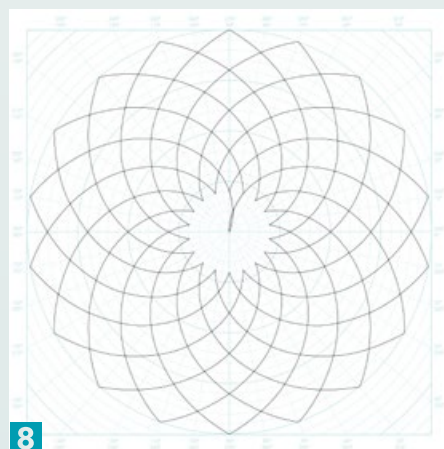

5 Continue filling in the row of X's along the inner bands, traversing four cells each time.

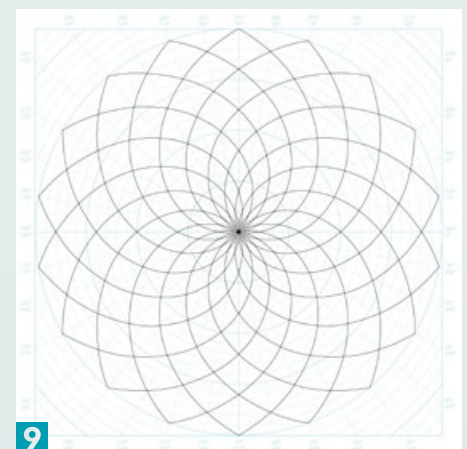

6 As you approach the center of the circle, the X's will become narrow and long.

7 Getting there...

8 The last "X" pattern connects to a single point at the center, creating a narrow loop.

9 The completed pattern!
